Specification: Page 152 "The auxiliary engine shall develop sufficient torque and a minimum of 700 horsepower to meet its normal operational requirements without exceeding the no-load speed at the peak of its certified gross brake horsepower curve"

Clarification: Please allow for a minimum output of 670 hp for the auxiliary engine. This option is rated for over 5,000 tons per hour in our configuration.

CAK RESPONSE: CAK will accept 670 hp for the auxiliary engine, provided the manufacturer provides certification required in SAE ARP5539 A, Appendix A - Testing.

Specification: Appendix A – Price Proposal Form

Clarification: Please remove the price proposal form from the bid package. Even with the one-week extension, there is not a lot of time to go through the pricing of the vehicle, as well as breaking out pricing for eight other options.

CAK RESPONSE: CAK chooses not to eliminate alternate pricing.
